## Project Design Phase-II Solution Requirements (Functional & Non-functional)

Team ID	PNT2022TMID06270		
Project Name	Project – Natural Disasters Intensity Analysis and Classification using Artificial Intelligence		
Maximum Marks	4 Marks		

## **Functional Requirements:**

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)		
FR-1	Request Permission	Access permission from web camera.		
FR-2	Disaster Prediction	Based on the webcam image, natural disaster is classified.		
FR-3	Accuracy	Since the training and testing images are huge, the accuracy is higher.		
FR-4	Speed	The generation of results from the input images are faster.		
FR-5	Resolution	The resolution of the integrated web camera should be high enough tocapture the video frames.		
FR-6	User Interface	Maximizing the interaction in Web Designing Service.		

## **Non-functional Requirements:**

FR No.	Non-Functional Requirement	Description	
NFR-1	Usability	User friendly and classify the disaster easily.	
NFR-2	Security	The model is secure due to the cloud deployment models and also there is no login issue.	
NFR-3	Reliability	Accurate prediction of the natural disaster and the website can also be fault tolerant.	
NFR-4	Performance	It is shown that the model gives almost 90 percent accuracy after continuous training.	
NFR-5	Availability	The website will be made available for 24 hours.	
NFR-6	Scalability	The website can run on web browsers like Google chrome, Microsoft edge and also it can be extended to the NDRF and customers.
