Project Design Phase-II Customer Journey Map

Team ID	PNT2022TMID06270	
Project Name	Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence	
Maximum Marks	4 Marks	

CUSTOMER JOURNEY MAP

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

					•
Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Users become aware of the AI model through the adventisements and social media Users become aware of this model through the government and nature protecting agencies	Video frames captured for the intensity analysis Classification and prediction results of the disasters	Classifies the natural disaster and tells the intensity of disaster disaster.	Determination of the nature and to alter people if extent of disaster disaster is predicted	Establishing link with government and Threshold for Mitigation Actuating Systems
Interactions What interactions do they have at each step along the way? = People: Who do they see or talk to? = Places: Where are they? = Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on- screen interfaces to communicate letchnical experts	Interaction with scientists and disaster analysers	Communicate their feedback to service providers Contact the helpline in case of disaster detection	Interaction with the government agencies for the first term of the term of t
Goals & motivations At each step, what is a person's primary goal or motivation? ("Hidp me" or "Hulp me avoid")	Simple user friendly UI To pain knowledge in the field of natural disaster classification	To make full use of the functionality of the model	Improved response time Accurate prediction	Examining the numbers of fetalities, injuries	Ensuring better Improvisation based service to customers provided
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Motivated to save human and property Productive algorithms and calculations for disaster classification	Delightful user possibility of continuous self-tearning mode using DL	Designing light weight Web Application Training and testing of model	Periodic forecasting without interruption Ensuring Robust Operation across terrains and climates	Examining the financial damage and Threshold Actuating Systems
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time consuming?	Time consuming analysis Complexity of algorithms	Fear of losing data Costly hardware and software components	Collection of large set of data is time consuming Frustation due to long duration of training of model	Failure due to technical issues Anger due to some error in resuts	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What Ideas do we have? What have others suggested?	Increased brand loyalty Advertising the model to public	Betterment of accuracy in prediction Retrieval of Training and testing data	Designing light weight Web Application Application	Optimizing the AI Model with respect to real world environment	Maximizing the uptime of the Web App Service Examining the false triggering and correcting it
